Giving Shape to Ideas

Ysoft Safe Security &

Access Management

Companies today invest large sums of money to secure their sensitive data, but many underestimate the risk of information leaks in paper form. Every printed document represents a security risk, with the potential for confidential data to reach any employee in your company, as well as your clients or competitors.

Ysoft SafeQ enables authentication at MFPs and printers with the simple swipe of an employee ID card or with a PIN number. Unique software architecture, embedded terminals and encrypted communications ensure a highly secure print workflow.

Security

- Secure your documents to prevent unauthorized access.
- See detailed information about the who/what/when/where of every operation in your print environment.
- Unlock the MFP or printer with the swipe of a card or by entering a PIN.

Access Management

- Set up print, copy, and scan rights based
- on each individual employee's job duties to reduce the chance of inappropriate use of your data.
- Enable color printing/copying only for employees who need it.
- Use Web interface access rights to limit print information only to authorized people.

Ysoft SafeQ Security & Access Management

YSoft SafeQ embedded terminals enable your organization to secure MFPs and printers from unauthorized use. Devices equipped with Ysoft SafeQ terminals remain locked until the user authenticates via card, PIN, and/or username and password.

Ysoft SafeQ security and rights management reduces the risk of unauthorized printing and restricts users from copying and scanning sensitive documents and publishing them outside of your organization.

Security

Access Management

- YSoft SafeQ terminals extend the functionality of your print environment, enabling you to control access, set permissions for the use of specific device features and monitor all operations.
- Ysoft SafeQ tracks who/what/when/where all data. You can also check the current status of each device and if prints are not printed, pinpoint the cause.
- YSoft SafeQ embedded terminals are developed to meet the exact requirements of your printing environment and to address the specific needs.
- Access Management is based on a set of defined access rights for users and/or roles. Such rights define what privileges users have, based on their job role.
For example, predefined rights can permit unlimited access to printers for senior management but to only permit users in the finance department to access devices in their own area.
- Access Management also controls the rights to the Ysoft SafeQ web interface. This helps you to protect sensitive information about your printing environment and offers access to authorized users only.
